Frontend CRC

Events Page	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> • Get an instance of all events from the backend • Display said events to the user in a compact view 	Collaborators: <ul style="list-style-type: none"> • Search • EventsDisplay

EventsDisplay	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> • Given any collection of events, display them all to the user in a compact view 	Collaborators: <ul style="list-style-type: none"> • EventCard

EventCard	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> • Given an instance of a singular event, display it to the user in a compact view 	Collaborators: <ul style="list-style-type: none"> • n/a

Add Events	
Parent/Subclasses: n/a	
Responsibilities <ul style="list-style-type: none"> • For a user to add an event to the database. • Allows user to specify title, description, location, time, date, category, and whether or not the event is intended for women only 	Collaborators <ul style="list-style-type: none"> • Side bar • After an event is added it will appear on the event page of all users. • Can be added to the liked events page by any user. • If a user attends this event it will

	appear in the history page
--	----------------------------

Liked	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Provides users the ability to interact with the like and dislike button for each event 	Collaborators: <ul style="list-style-type: none"> Sidebar LikesDAO

Login Page	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> If registered <ol style="list-style-type: none"> the page provides the user the ability to log into their account The user is able to access user-only features once logged in, such as join events, get notifications, etc If not registered <ol style="list-style-type: none"> The page is able to redirect to the register page, and the user can register 	Collaborators: <ul style="list-style-type: none"> Sidebar User register

Register	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Updates global state when user clicks outside of Register. Updates user info state (username, password, email, firstname, lastname) per keystroke. Posts user info when submit button 	Collaborators: <ul style="list-style-type: none"> RegisterContext User

is clicked.	
-------------	--

RegisterContext	
Parent/Subclasses: Context	
Responsibilities: <ul style="list-style-type: none"> Stores global state to be used in other classes. 	Collaborators: <ul style="list-style-type: none"> n/a

Sidebar	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Act as a router between the different pages of the application. 	Collaborators: <ul style="list-style-type: none"> Events Page Liked Login Register

Backend CRC

Search	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Return an instance of every event in the database Return an instance of a user from the database given their id 	Collaborators: <ul style="list-style-type: none"> MongoDB eventual Database

MongoDB eventual Database	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Provides collections of data containing all the information users interact with while using the application. 	Collaborators: <ul style="list-style-type: none"> n/a

Event	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Provides a model for events that users can create, like and sign up for. Defines how the event will be formatted in the MongoDB database <i>eventual</i> Provides the format that events are returned when called from the database to be displayed/interacted with in the frontend. 	Collaborators: <ul style="list-style-type: none"> MongoDB eventual Database

User	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Provides a model for users that contains their username, encrypted password, email, and name object with first and last name. Defines CRUD operations for users. 	Collaborators: <ul style="list-style-type: none"> MongoDB eventual Database

LikesDAO	
Parent/Subclasses: n/a	
Responsibilities: <ul style="list-style-type: none"> Provides functionality to create and delete a like object from testLikes collection in MongoDB. Provides functionality to update the num_likes field in each object of testEvents collection in MongoDB. 	Collaborators: <ul style="list-style-type: none"> MongoDB eventual Database

Software Architecture

We will be building our project on a 3-tier architecture using the MERN Stack. Having as a 1st tier React which is responsible of the front end web application, 2nd tier ExpressJS and NodeJS acting as a middleware responsible of being the runtime environment and server application framework and at 3rd tier MongoDB which is our No-SQL database.

Reference to the 3-tier architecture: <https://www.mongodb.com/mern-stack>
