# Network Diagram:

The focus of our Sprint 3 were features pertaining to user notifications and emails to users.

Prior to starting this sprint, we determined that the task of adding email event information (**RUN-46**) was one that absolutely **must** be completed relatively early in the sprint. We noted that this task had the greatest out-degree, so it was imperative for this task to be completed early in the sprint or the entire project would be delayed.

In our diagram of 12 tickets/tasks, we that determined the critical path was the path with the greatest estimated completion time, the path of **RUN-46**, **RUN-32**, and **RUN-25** (10 days in total).

To keep our sprint in schedule, we held three standup meetings every week and logged out our progress to ensure **RUN-46** (and after, **RUN-32**) was completed with as soon as possible, and with the necessary prerequisites for subsequent tickets.
